Code No. : 18621 B

**VASAVI COLLEGE OF ENGINEERING (AUTONOMOUS), HYDERABAD**

Accredited by NAAC with A++ Grade

**B.E. (I.T.) VIII-Semester Main & Backlog Examinations, June-2022****Software Project Management (PE-V)**

Time: 3 hours

Max. Marks: 60

Note: Answer all questions from Part-A and any FIVE from Part-B

**Part-A (10 × 2 = 20 Marks)**

Q. No.	Stem of the question	M	L	CO	PO																								
1.	Identify the five necessary improvements of waterfall model.	2	1	1	1																								
2.	Based on what parameters software cost can be estimated? Explain.	2	2	1	1																								
3.	What is the role of design workflow in four lifecycle phases?	2	1	2	1																								
4.	Differentiate between major milestones and minor milestones.	2	2	2	1																								
5.	Define Work Breakdown Structures (WBS). What are the conventional WBS issues?	2	1	3	1																								
6.	List out the default roles in a software Line-of-Business organization.	2	1	3	1																								
7.	Identify the seven core metrics of the software process.	2	1	4	1																								
8.	Give the perspectives of rework and adaptability metric.	2	1	4	1																								
9.	What is the importance of modern project profiles? What are the benefits of Capability Maturity Model?	2	1	5	1																								
10.	What are the factors that affect Software process improvement? Identify the two major improvements in next-generation software cost estimation models.	2	1	5	1																								
<b>Part-B (5 × 8 = 40 Marks)</b>																													
11. a)	Calculate the Return on Investment (ROI) for each of the projects shown in below table and explain which project is most worthwhile and why?	4	3	1	2																								
<table border="1"> <thead> <tr> <th>Year</th> <th>Project 1</th> <th>Project 2</th> </tr> </thead> <tbody> <tr> <td>0</td> <td>-100,000</td> <td>-120,000</td> </tr> <tr> <td>1</td> <td>10,000</td> <td>30,000</td> </tr> <tr> <td>2</td> <td>10,000</td> <td>30,000</td> </tr> <tr> <td>3</td> <td>10,000</td> <td>30,000</td> </tr> <tr> <td>4</td> <td>20,000</td> <td>30,000</td> </tr> <tr> <td>5</td> <td>100,000</td> <td>75,000</td> </tr> <tr> <td>Net Profit</td> <td>50,000</td> <td>75,000</td> </tr> </tbody> </table>						Year	Project 1	Project 2	0	-100,000	-120,000	1	10,000	30,000	2	10,000	30,000	3	10,000	30,000	4	20,000	30,000	5	100,000	75,000	Net Profit	50,000	75,000
Year	Project 1	Project 2																											
0	-100,000	-120,000																											
1	10,000	30,000																											
2	10,000	30,000																											
3	10,000	30,000																											
4	20,000	30,000																											
5	100,000	75,000																											
Net Profit	50,000	75,000																											
Where Negative values represent expenditure and positive values represent income for project 1 and project 2.																													
b)	Compare and contrast conventional process and modern iterative process with respect to quality driver parameters.	4	4	1	2																								
12. a)	Analyze the "Construction phase" of software development life cycle with respect to the following: (i)Primary objectives (ii)Essential activities (iii)Evaluation criteria	4	4	2	2																								

Contd... 2

b)	What are the seven software process workflows? What levels of activity takes place during each of the four life cycle phases? Explain with neat sketch.	4	2	2	11
13. a)	Explain about the software development and assessment team activities over the project life cycle.	4	2	3	11
b)	Illustrate how the team's center of gravity shifts over the life cycle with 50 % of staff assigned to one set of activities in each phase.	4	3	3	11
14. a)	Draw the graphical perspective of earned value system with respect to basic parameters. Consider a project with the given information: Earned Value (EV) = \$400, Actual Cost (AC) = \$350 , Planned Value (PV)= \$450 and the original project budget is \$1,000. Assume that the remaining work will be impacted by the current cost performance and current schedule performance. Calculate the Estimate At Completion (EAC) of the project?	4	3	4	2
b)	The latest Earned Value(EV) report of the project shows the following: Cost Performance Index(CPI) = 1.4, Schedule Performance Index(SPI) = 0.9, Planned Value(PV) = \$600,000, Schedule Variance (SV) = -\$230,000.  Calculate the Cost Variance (CV) of the project?	4	3	4	2
15. a)	Compare and analyze the Engineering stage and Production stage of Next-generation cost models with respect to the following parameters:  (i)Team size    (ii)Product    (iii)Focus    (iv)Phases	4	4	5	11
b)	Illustrates the differences between the progress profile of a modern project and a typical conventional project over the lifecycle phases with a neat sketch. Identify the difference in workflow cost allocation between a conventional process and a modern process among the various project workflows.	4	4	5	11
16. a)	What is the significance of reducing the product size? Explain briefly how the product size can be reduced.	4	2	1	1
b)	Identify the different categories of artifact sets. Describe each artifact set in detail.	4	2	2	1
17.	Answer any <i>two</i> of the following:				
a)	Analyze the difference between Macro Analysis Technique and Micro Analysis Technique.	4	4	3	2
b)	Illustrates two primary dimensions of process variability. Summarize the different priorities for tailoring the process framework.	4	3	4	2
c)	Explain software process maturity levels in CMM with a neat diagram.	4	2	5	1

M : Marks; L: Bloom's Taxonomy Level; CO; Course Outcome; PO: Programme Outcome

i)	Blooms Taxonomy Level – 1	20 %
ii)	Blooms Taxonomy Level – 2	30 %
iii)	Blooms Taxonomy Level – 3 & 4	50 %
